WORK EXPERIENCE

Software Engineer 2023 (Chatlas)

- Contribute as a full-stack developer to Chatlas, a cutting-edge startup specializing in AI tech support chatbots.
- Proficiently utilize React, Express, and Tailwind CSS to deliver robust solutions.
- Collaborate in designing and implementing essential features to enhance product functionality.

Software Developer 2023 - Present (Succeedium)

- Developing [SPACE](#) (Succeedium Planning Analytics Cloud Extension), a Google Chrome extension that adds more features to IBM Planning Analytics.
- Used React and Carbon UI on the client and Python (Fast API) and Postgres on the server.

Running my own small startup (Pass Protect) 2022-2023

pass-protect.com

- Founded and developed Pass Protect, a cross-platform password manager encompassing web, Chrome Extension, Android app, and iOS app.
- Proficiently utilized technologies such as Express, MongoDB, React, React Native, Tailwind CSS, and Node.js to build the platform from the ground up.
- Successfully integrated recurring payment functionality through Stripe.

PROJECTS

Portfolio for more details: ronanl.dev

Pass Protect [LINK](#)

- Created a versatile multi-platform password manager, further details available in the work experience section.

Portail Élève CECCE [LINK \(ARCHIVE\)](#) | [GITHUB](#)

- Designed and developed a highly successful mobile app for my local school board, garnering thousands of downloads.
- The app served as a mobile version of the online student dashboard, enabling students to access their grades and schedule conveniently.
- Utilized React Native to build the application, ensuring a seamless cross-platform experience.
- Although the app was later removed from the App Store due to changes in educational systems across Ontario, you can find an archive of the App Store listing in the provided GitHub link.
